

Ringlead Deduplication and Duplicate Prevention Bundle

The RingLead Deduplication and Duplicate Prevention Bundle is an all-in-one package that makes your deduplication process easier. It meets all of the key aspects of deduplication, including finding duplicates, removal, and prevention. With this total package, not only are you getting the tools you need to solve this problem, but we will make the implementation process easier.

Our Deduplication and Duplicate Prevention Bundle includes four of our core products focused solely on duplicate removal and prevention.

- Data Cleanse: Duplicate Analysis and Removal
- Unique Entry: Manual Entry Duplicate Prevention
- Unique Web-to-Lead: Web Form Duplicate Prevention
- Unique Upload: List Upload Duplicate Prevention

DATA CLEANSE: Duplicate Analysis and Removal

Data Cleanse analyzes your database for duplicates, missing data, and unstandardized data. It also allows for quick and easy mass deduplication of Salesforce records, including Leads, Contacts and Accounts.

UNIQUE ENTRY: Manual Entry Duplicate Prevention

Unique Entry checks and alerts you to possible duplicates, as you type in Leads, Accounts, and Contacts into Salesforce. You'll be made aware of a possible duplicate after entering just one field, saving the frustration of entering an entire record only to be stopped on Save.

UNIQUE WEB-TO-LEAD: Web Form Duplicate Prevention

Unique Web-to-Lead processes all web form submissions, checking for existing Leads, Contacts and Accounts. Unique Web-to-Lead integrates with the leading marketing automation applications and is the perfect complement to Eloqua, Marketo, Pardot, and more.

UNIQUE UPLOAD: List Upload Duplicate Prevention

Unique Upload prevents the creation of duplicate records while uploading lists into Salesforce. Powerful options allow you to control what happens when duplicates or related records are found.
